

Mouse Chia (Acidic mammalian chitinase) ELISA Kit | Chia elisa kit

Mouse Chia (Acidic mammalian chitinase) ELISA Kit

CATALOG #
AAA277459

REACTIVITY
Mouse

PRODUCT SYNONYMS

Chia (Acidic mammalian chitinase); Mouse Chia (Acidic mammalian chitinase) ELISA Kit; Acidic mammalian chitinase [Precursor]; Acidic mammalian chitinase; AMCase; Chia; CHIA_HUMAN;CHIT2; chitinase; acidic; DKFZp313J1722; ECF L; Lung specific protein TSA1902; Lung-specific protein TSA1902; RP5 1125M8.1; TSA1902; Chia elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of Mouse Chia. No significant cross-reactivity or interference between Mouse Chia and analogues was observed.
Assay Type	Sandwich
Detection Range	0.16-10 ng/mL
Sensitivity	0.058 ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay)? CV% < 8%. Three samples of known concentration were tested twenty times on 1 plate to assess intra-assay precision.
Inter-assay Precision	Inter-assay Precision (precision between assays)? CV% < 10%. Three samples of known concentration were tested in forty separate assays to assess inter-assay precision.

ADDITIONAL INFORMATION

Related Product Information for Chia elisa kit

Principle of the Assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Chia. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Chia. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Chia, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Chia in the samples is then determined by comparing the OD of the samples to the standard curve.
