ADDITIONAL INFORMATION

Related Product Information for CCL5 elisa kit

Product Overview: The ELISA (Enzyme-Linked Immunosorbent Assay) kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of samples in cell culture supernatant, serum, plasma (EDTA, citrate, heparin).

Intended Use: This Human CCL5/Rantes ELISA kit is intended for laboratory research use only. The stop solution changes color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of Human CCL5/Rantes in the sample, this Human CCL5/Rantes ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of optical density versus Human CCL5/Rantes concentration. The concentration of the samples is then determined by comparing the O.D. of the samples to the standard curve.
