ADDITIONAL INFORMATION

Related Product Information for METRNL elisa kit	Background: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of METRNL in human serum, plasma, cell culture supernatants, cell lysates, tissue homogenates and other biological fluids. Principle of the Assay: This assay employs the quantitative sandwich enzyme immunoassay technique. An antibody specific for human METRNL has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any METRNL present is bound by the immobilized antibody. After washing away any unbound substances, and then a detection antibody specific for METRNL is added to the wells and binds to the combination of capture antibody METRNL in sample. Following a wash to remove any unbound combination, and enzyme conjugate is added to the wells. Following incubation and wash steps, a substrate solution is added to the wells and color develops in proportion to the amount of METRNL bound in the initial step. The color development is stopped and the absorbance is measured.
