

Human PARC/CCL18 ELISA Kit | PARC/CCL18 elisa kit

Human PARC/CCL18 ELISA Kit

CATALOG #
AAA281541

REACTIVITY
Human

PRODUCT SYNONYMS

PARC/CCL18; Human PARC/CCL18 ELISA Kit; PARC/CCL18 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of CCL18. No significant cross-reactivity or interference between CCL18 and analogues was observed.
Samples	Cell culture supernates, serum and plasma
Assay Type	Quantitative Sandwich
Sensitivity	< 6.2 pg/mL
Intra-assay Precision	Three samples of known concentration were tested 20 times on one plate to evaluate the Intra-plate precision.
Inter-assay Precision	Three samples of known concentration were tested 20 times separate assays to evaluate the Inter-plate precision. Assay were using two lots of components.

ADDITIONAL INFORMATION

Related Product Information for PARC/CCL18 elisa kit

Principle of the Assay: This assay employs the quantitative sandwich enzyme immunoassay technique. A monoclonal antibody specific for CCL18 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any CCL18 present is bound by the immobilized antibody. Following incubation unbound samples are removed during a wash step, and then a detection antibody specific for CCL18 is added to the wells and binds to the combination of capture antibody CCL18 in sample. Following a wash to remove any unbound combination, and enzyme conjugate is added to the wells. Following incubation and wash steps, a substrate is added. A colored product TMB is formed in proportion to the amount of CCL18 present in the sample. The reaction is terminated by addition of acid and absorbance is measured. A standard curve is prepared from seven CCL18 standard dilutions and CCL18 sample concentration determined.

Background/Introduction: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of CCL18 in monkey serum, plasma and cell culture supernates.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
