

Human GM-CSF ELISA Kit | GM-CSF elisa kit

Human GM-CSF FAST ELISA Kit

CATALOG #
AAA282452

REACTIVITY
Human

PRODUCT SYNONYMS

GM-CSF; Human GM-CSF FAST ELISA Kit; GM-CSF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay recognizes both recombinant and natural human GM-CSF. The factors listed below were prepared at 50ng/ml and assayed for cross-reactivity.
Assay Type	Quantitative Sandwich
Detection Range	7.8-500pg/mL
Sensitivity	< 6.4pg/mL
Intra-assay Precision	Intra-plate Precision 3 samples with low, middle and high level GM-CSF were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-plate Precision 3 samples with low, middle and high level GM-CSF were tested on 3 different plates, 20 replicates in each plate. Inter-Assay: CV<15%
Preparation and Storage	Ship: Ice Pack

ADDITIONAL INFORMATION

Related Product Information for GM-CSF elisa kit	Background: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of GM-CSF in human serum, plasma, cell culture supernatants and other biological fluids. Principle of the Assay: This assay employs the quantitative sandwich enzyme immunoassay technique. An antibody specific for human GM-CSF has been pre-coated onto a microplate. Samples (or Standards) and biotinylated detection antibody specific for GM-CSF are added to the wells, GM-CSF binds to the antibody on the solid-phase vector and the detection antibody to complete the "one-step sandwich". After incubation, the wells are washed to remove unbound material, and Avidin-Horseradish Peroxidase (HRP) conjugate is added to the wells. Following incubation and wash steps, a substrate solution is added to the wells and color develops in proportion to the amount of GM-CSF bound in the initial step. The color development is stopped and the absorbance is measured.
