Application Data

Recombinant Rat IL-3 stimulates cell proliferation of the NFS_x005f;60 mouse myelogenous leukemia lymphoblast cells. The ED₅₀ for this effect is 2.6?10.6 ng/mL, corresponding to a specific activity of 9.4×10⁴~3.85×10⁵ units/mg.

SDS-PAGE

Recombinant Rat IL-3 Protein was determined by SDS-PAGE with Coomassie Blue, showing a band at 25-35 kDa.

ADDITIONAL INFORMATION

Related Product Information for IL3 recombinant protein	IL3 (interleukin 3), also known as IL-3, is a potent growth-promoting cytokine that belongs to the IL-3 family. IL3/IL-3 also belongs to the group of interleukins. Interleukins are produced by a wide variety of body cells. The function of the immune system depends in a large part on interleukins, and rare deficiencies of a number of them have been described, all featuring autoimmune diseases or immune deficiency. The majority of interleukins are synthesized by helper CD4+ T lymphocytes, as well as through monocytes, macrophages, and endothelial cells. They promote the development and differentiation of T, B, and hematopoietic cells. IL3/IL-3 is capable of supporting the proliferation of a broad range of hematopoietic cell types. It is involved in a variety of cell activities such as cell growth, differentiation, and apoptosis. IL3/IL-3 has been shown to also possess neurotrophic activity, and it may be associated with neurologic disorders.
