Application Data

Recombinant Rat IL-5 stimulates cell proliferation assay using TF-1 Human erythroleukemic cells. The ED₅₀ for this effect is 0.695-2.78 ng/mL, corresponding to a specific activity of 3.60×10⁵~1.44×10⁶ units/mg.

SDS-PAGE

Recombinant Rat IL-5 Protein was determined by SDS-PAGE with Coomassie Blue, showing a band at 20-30kDa.

ADDITIONAL INFORMATION

Related Product Information for IL-5 recombinant protein	Interleukin-5 (IL-5), which is produced primarily by type 2 T helper lymphocytes (Th2), is an eosinophil differentiation and activation factor. Antagonism of IL-5 activity is being explored as a potential treatment of a number of disease conditions associated with eosinophils in animal models. Interleukin-5 (IL-5) which was previously named T cell replacing factor, B cell growth and differentiation factor, colony forming unit growth stimulating factor and eosinophil differentiation factor is produced predominantly by T cells.
