Related Product Information for anti-VSV-g Tag antibody

Epitope tags consisting of short sequences recognized by well-characterized antibodies have been widely used in the study of protein expression in various systems. VSV-g is an epitope tag composed of an 11 residue peptide, YTDIEMNRLGK, derived from the Vesicular Stomatitis viral glycoprotein. anti-VSV-g polyclonal antibody provides a simple solution to detect the expression of a VSV-g-tagged protein in cells.
