IMAGES

DB (Dot Blot)

Dot blot analysis of anti-Phospho-ABL1-Y272 Antibody (Cat. #AAA297739) on nitrocellulose membrane. 50ng of Phospho-peptide or Non Phospho-peptide per dot were adsorbed. Antibodies working concentration was 0.5ug per ml. Dilution: DB 1:500

IHC (Immunohistochemistry)

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by AEC staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma. Dilution: IHC-P 1:50~100

IF (Immunofluorescence)

Confocal immunofluorescent analysis of Phospho-ABL1-Y272 Antibody (Cat#AAA297739) with HeLa cells followed by Alexa Fluor 488-conjugated goat anti-rabbit IgG (green). DAPI was used to stain the cell nuclei (blue). Dilution: IF 1:10–50

ADDITIONAL INFORMATION

Related Product Information for anti-ABL1 antibody	ABL1 is a cytoplasmic and nuclear protein tyrosine kinase that has been implicated in processes of cell differentiation, cell division, cell adhesion, and stress response. Activity of c-Abl protein is negatively regulated by its SH3 domain, and deletion of the SH3 domain turns ABL1 into an oncogene. The t (9;22) translocation results in the head-to-tail fusion of the BCR and ABL1 genes present in many cases of chronic myelogenous leukemia. The DNA-binding activity of the ubiquitously expressed ABL1 tyrosine kinase is regulated by CDC2-mediated phosphorylation, suggesting a cell cycle function for ABL1.
