ADDITIONAL INFORMATION

Related Product Information for anti-TAF1 antibody	This gene encodes the largest subunit of TFIID. This subunit binds to core promoter sequences encompassing the transcription start site. It also binds to activators and other transcriptional regulators, and these interactions affect the rate of transcription initiation. This subunit contains two independent protein kinase domains at the N- and C-terminals, but also possesses acetyltransferase activity and can act as a ubiquitin-activating/conjugating enzyme.
Product Categories/Family for anti-TAF1 antibody	Total protein Ab
