IMAGES

WB (Western Blot)
Western blot analysis of extracts of HeLa cells, using Liprin alpha 1 antibody.

IHC (Immunohistochemistry)
AAA322928 at 1/100 staining Human breast cancer tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at 22 degree C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

WB (Western Blot)
Western blot analysis of extracts from various samples, using Liprin alpha 1 antibody. Lane 1: 293 treated with blocking peptide. Lane 2: 293; Lane 3: hela;

ADDITIONAL INFORMATION

Related Product Information for anti-LIP-1 antibody	Function: May regulate the disassembly of focal adhesions. May localize receptor-like tyrosine phosphatases type 2A at specific sites on the plasma membrane, possibly regulating their interaction with the extracellular environment and their association with substrates. Subunit Structure: Forms homodimers and heterodimers with liprins-alpha and liprins-beta. Interacts with the second PTPase domain of PTPRD, PTPRF and PTPRS. Interacts with GIT1, KIF1A and GRIP1 (By similarity). Similarity: The N-terminal coiled coil regions mediate homodimerization preferentially and heterodimerization type alpha/alpha. The C-terminal, non-coiled coil regions mediate heterodimerization type alpha/beta and interaction with PTPRD, PTPRF and PTPRS. Belongs to the liprin family. Liprin-alpha subfamily.
