IMAGES

WB (Western Blot)
Western blot analysis of extracts of HeLa cells, using SNX17 antibody.

IHC (Immunohistochemistry)
AAA322996 at 1/100 staining Mouse kidney tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at 22 degree C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

ADDITIONAL INFORMATION

Related Product Information for anti-SNX17 antibody	Function: Critical regulator of endosomal recycling of numerous receptors, channels, and other transmembrane proteins. Binds to NPxY sequences in the cytoplasmic tails of target cargos. Plays a role in the sorting of endocytosed LRP1 and APP, and prevents their degradation. Required for maintenance of normal cell surface levels of APP and LRP1. Recycles internalized integrins ITGB1, ITGB5 and their associated alpha subunits, preventing them from lysosomal degradation. Interacts with membranes containing phosphatidylinositol 3-phosphate (PtdIns(3P)). Subunit Structure: Monomer. Interacts with APP (via cytoplasmic YXNPXY motif). Interacts with KIF1B (By similarity). Interacts with the C-termini of P-selectin, PTC, LDLR, VLDLR, LRP1 and LRP8. Interacts with KRIT1 (via N-terminus). Interacts with HRAS. Interacts with ITGB1 and ITGB5 (via NPxY motif). Similarity: The PX domain mediates specific binding to phosphatidylinositol 3-phosphate (PtdIns(P3)). Required for association with endosomes.The PTB-like F3 module within the FERM-like domain mediates cargo recognition via their NPxY sequences, while the F1 module (Ras-associating) is responsible for interaction with membrane-bound HRAS. Belongs to the sorting nexin family.
