IMAGES

WB (Western Blot)
Western blot analysis of Jurkat whole cell lysates, using ACP5 Antibody. The lane on the left is treated with the antigen-specific peptide.

WB (Western Blot)
Western blot analysis of extracts from rat brain, using ACP5 Antibody.

IHC (Immunohistochemistry)
AAA326738 at 1/100 staining Human gastric tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at 22 degree C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

ADDITIONAL INFORMATION

Related Product Information for anti-ACP5 antibody	Description: This gene encodes an iron containing glycoprotein which catalyzes the conversion of orthophosphoric monoester to alcohol and orthophosphate. It is the most basic of the acid phosphatases and is the only form not inhibited by L(+)-tartrate. Function: Involved in osteopontin/bone sialoprotein dephosphorylation. Its expression seems to increase in certain pathological states such as Gaucher and Hodgkin diseases, the hairy cell, the B-cell, and the T-cell leukemias. Subunit Structure: Exists either as monomer or, after proteolytic processing, as a dimer of two chains linked by disulfide bond(s). Similarity: Belongs to the metallophosphoesterase superfamily. Purple acid phosphatase family.
