WB (Western Blot)
Western blot analysis of extracts from rat brain, using HADHA Antibody.

IHC (Immunohistochemistry)
AAA326991 at 1/100 staining Human gastric tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at 22 degree C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

WB (Western Blot)
Western blot analysis of Jurkat whole cell lysates, using HADHA Antibody. The lane on the left is treated with the antigen-specific peptide.

ADDITIONAL INFORMATION

Related Product Information for anti-HADHA antibody	Description: This gene encodes the alpha subunit of the mitochondrial trifunctional protein, which catalyzes the last three steps of mitochondrial beta-oxidation of long chain fatty acids. The mitochondrial membrane-bound heterocomplex is composed of four alpha and four beta subunits, with the alpha subunit catalyzing the 3-hydroxyacyl-CoA dehydrogenase and enoyl-CoA hydratase activities. Mutations in this gene result in trifunctional protein deficiency or LCHAD deficiency. The genes of the alpha and beta subunits of the mitochondrial trifunctional protein are located adjacent to each other in the human genome in a head-to-head orientation. Function: Bifunctional subunit. Subunit Structure: Octamer of 4 alpha (HADHA) and 4 beta (HADHB) subunits. Similarity: In the N-terminal section; belongs to the enoyl-CoA hydratase/isomerase family.In the central section; belongs to the 3-hydroxyacyl-CoA dehydrogenase family.
