Applicable Applications for ASGR1 blocking peptide	Blocking
Function	Blocking peptides are peptides that bind specifically to the target antibody and block antibody binding. These peptide usually contains the epitope recognized by the antibody. Antibodies bound to the blocking peptide no longer bind to the epitope on the target protein. This mechanism is useful when non specific binding is an issue, for example, in Western Blotting (immunoblot) and immunohistochemistry (IHC). By comparing the staining from the blocked antibody versus the antibody alone, one can see which staining is specific; Specific binding will be absent from the western blot or immunostaining performed with neutralized antibody.
Preparation and Storage	Store at 2-8 degree C for up to 6 months. For long term storage store at -20 degree C
