

Human Plasmin-Antiplasmin Complex (PAP) ELISA Kit | PAP elisa kit

Human Plasmin-Antiplasmin Complex (PAP) ELISA Kit

CATALOG #
AAA331473

REACTIVITY
Human

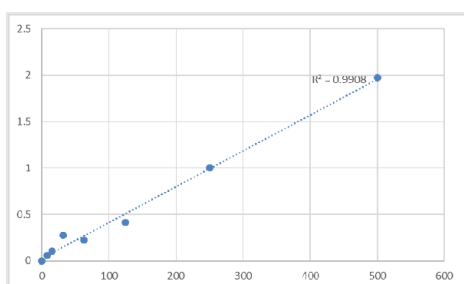

PRODUCT SYNONYMS

Plasmin-Antiplasmin Complex (PAP); Human Plasmin-Antiplasmin Complex (PAP) ELISA Kit; PAP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	Human Plasmin-antiplasmin complex (PAP) ELISA Kit has high sensitivity and excellent specificity for detection of Human PAP. No significant cross-reactivity or interference between Human PAP and analogues was observed.
Assay Type	Sandwich
Preparation and Storage	Store at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for PAP elisa kit

Principle of the Assay: Human Kallikrein-4 (KLK4) ELISA Kit employs a two-site sandwich ELISA to quantitate KLK4 in samples. An antibody specific for Human KLK4 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any KLK4 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugated KLK4 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of KLK4 bound in the initial step. The color development is stopped and the intensity of the color is measured.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
