

Hepatitis C Virus Nucleocapsid Recombinant Protein | HCV recombinant protein

Recombinant Hepatitis C Virus Nucleocapsid (core) Genotype-1

CATALOG #
AAA38306

PRODUCT SYNONYMS

Hepatitis C Virus Nucleocapsid; Recombinant Hepatitis C Virus Nucleocapsid (core) Genotype-1; HCV Core Genotype-1; Hepatitis C Virus Core Genotype-1 Recombinant; HCV Genotype-1; HCV recombinant protein

PRODUCT SPECIFICATIONS

Specificity	Immunoreactive with sera of HCV-infected individuals.
Purity/Purification	HCV Core Genotype-1 protein is >95% pure as determined by 10% PAGE (coomassie staining). HCV Core Genotype-1 protein was purified by proprietary chromatographic technique.
Form/Format	50mM Tris pH-8 & 5mM EDTA.
Preparation and Storage	HCV Core Genotype-1 although stable at 4 degree C for 1 week, should be stored below -18 degree C. Please prevent freeze thaw cycles.

ADDITIONAL INFORMATION

Related Product Information for HCV recombinant protein	Description: The E Coli derived recombinant protein contains the HCV core nucleocapsid immunodominant regions, amino acids 1-102. Introduction: HCV is a small 50nm, enveloped, single-stranded, positive sense RNAvirus in the family Flaviviridae. HCV has a high rate of replication with approximately one trillion particles produced each day in an infected individual. Due to lack of proofreading by the HCV RNA polymerase, the HCV has an exceptionally high mutation rate, a factor that may help it elude the host's immune response. Hepatitis C virus is classified into six genotypes(1-6) with several subtypes within each genotype. The preponderance and distribution of HCV genotypes varies globally. Genotype is clinically important in determining potential response to interferon-based therapy and the required duration of such therapy. Genotypes 1 and 4 are less responsive to interferon-based treatment than are the other genotypes (2, 3, 5 and 6).
Product Categories/Family for HCV recombinant protein	Viral Antigens; HEPATITIS C VIRUS; Viral Antigens; Hepatitis C

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
