ADDITIONAL INFORMATION

Related Product Information for alpha-La elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human alpha-La antibody. alpha-La present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human alpha-La Antibody is added and binds to alpha-La in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated alpha-La antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human alpha-La. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Human alpha Lactalbumin (also known as alpha-La) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
