Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Resistin (also known as Retn) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human Retn antibody. Retn present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human Retn Antibody is added and binds to Retn in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated Retn antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human Retn. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm
