Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat Troponin T (also known as Tn-T) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat Tn-T antibody. Tn-T present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat Tn-T Antibody is added and binds to Tn-T in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated Tn-T antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat Tn-T. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
