ADDITIONAL INFORMATION

Related Product Information for Pre-PEDF elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Phosphorylated Type of PI3K (also known as P-PI3K) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human P-PI3K antibody. P-PI3K present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human P-PI3K Antibody is added and binds to P-PI3K in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated P-PI3K antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human P-PI3K. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
