ADDITIONAL INFORMATION

Related Product Information for BK elisa kit

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat BK antibody. BK present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat BK Antibody is added and binds to BK in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated BK antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat BK. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat bradykinin (also known as BK) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
