ADDITIONAL INFORMATION

Related Product Information for TFR elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of human Transcriptional Regulator ATRX (also known as ATRX) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human ATRX antibody. ATRX present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human ATRX Antibody is added and binds to ATRX in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated ATRX antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human ATRX. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
