Intended Uses: This sandwich kit is for the accurate quantitative detection of human Zinc Finger E-Box Binding Homeobox 3 (also known as ZEB3) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human ZEB3 antibody. ZEB3 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human ZEB3 Antibody is added and binds to ZEB3 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated ZEB3 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human ZEB3. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
