Intended Uses: This sandwich kit is for the accurate quantitative detection of Canine Tumor Necrosis Factor Alpha (also known as TNF A) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Canine TNF A antibody. TNF A present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Canine TNF A Antibody is added and binds to TNF A in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated TNF A antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Canine TNF A. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
