Intended Uses: This sandwich kit is for the accurate quantitative detection of human Protein P200 (also known as P200) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human P200 antibody. P200 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human P200 Antibody is added and binds to P200 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated P200 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human P200. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
