Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Interleukin 36 beta (also known as IL-36B) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human IL-36B antibody. IL-36B present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human IL-36B Antibody is added and binds to IL-36B in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated IL-36B antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human IL-36B. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
