ADDITIONAL INFORMATION

Related Product Information for anti-NGF antibody	Description: Rabbit IgG polyclonal antibody for Beta-nerve growth factor(NGF) detection. Tested with WB in Human, Mouse, Rat. Background: Nerve growth factor is a polypeptide involved in the regulation of growth and differentiation of sympathetic and certain sensory neurons. The nucleotide sequence of human and mouse beta-NGF are very similar. The beta-subunits of nerve growth factor(NGFB) have been assigned to mouse chromosome 3 and human chromosome 1p22. The human gene for the beta subunit of nerve growth factor is located on the proximal short arm of chromosome 1. A mutation in the nerve growth factor beta gene(NGFB) causes loss of pain perception.
