ADDITIONAL INFORMATION

Related Product Information for anti-VIL1 antibody	Description: Rabbit IgG polyclonal antibody for Villin-1(VIL1) detection. Tested with WB, IHC-P in Human;Mouse;Rat. Background: Villin is known as VIL1. This gene encodes a member of a family of calcium-regulated actin-binding proteins. This protein represents a dominant part of the brush border cytoskeleton which functions in the capping, severing, and bundling of actin filaments. Two mRNAs of 2.7 kb and 3.5 kb have been observed; they result from utilization of alternate poly-adenylation signals present in the terminal exon. In vertebrates, the villin proteins help to support the microfilaments of the microvilli of the brush border. It may play a role in cell plasticity through F-actin severing.
