ADDITIONAL INFORMATION

Related Product Information for anti-ACTB antibody

Actins are essential components of the cytoskeleton with critical roles in a wide range of cellular processes including cell migration, cell division, and the regulation of gene expression. Beta-actin, product of the *Actb* gene, is one of six different actin isoforms and is one of the two nonmuscle cytoplasmic actins (gamma-actin is the other); both are ubiquitously expressed and highly conserved from birds to mammals. Mutations in the *Actb* gene have been associated with diffuse large B-cell lymphoma. Beta-actin (molecular weight ~42kDa) is often used as a loading control in Western blots.
