ADDITIONAL INFORMATION

Related Product Information for anti-GABRA4 antibody	Gamma-aminobutyric acid (GABA) is the primary inhibitory neurotransmitter in the central nervous system, causing a hyperpolarization of the membrane through the opening of a Cl ⁻ channel associated with the GABA-A receptor subtype. GABA-A receptors are important therapeutic targets for a range of sedative, anxiolytic, and hypnotic agents and are implicated in several diseases including epilepsy, anxiety, depression, and substance abuse. The GABA-A receptor is a multimeric subunit complex.
Product Categories/Family for anti-GABRA4 antibody	Family: Ion Channel; Subfamily: GABA A receptor
