ADDITIONAL INFORMATION

Related Product Information for anti-ACKR3 antibody	RDC1 was originally considered to be an Adrenomedullin receptor that binds calcitonin gene-related peptide (CGRP) and adrenomedullin. RDC1 and GPRN1 represent two tissue-specific subtypes of the same 60-kD receptor. RDC1 has the structural characteristics of a chemokine receptor. Recently it has been shown that RDC1 binds to the chemokine CXCL12 and should be considered to be a chemokine receptor.
Product Categories/Family for anti-ACKR3 antibody	Family: GPCR; Subfamily: Chemokine
