ADDITIONAL INFORMATION

Related Product Information for IL-35 elisa kit	Principle of the Assay: This assay employs a two-site sandwich ELISA to quantitate IL-35 in samples. An antibody specific for IL-35 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyIL-35 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for IL-35 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of IL-35 bound in the initial step. The color development is stopped and the intensity of the color is measured.
