Principle of the Assay: This assay is based on the competitive enzyme immunoassay for the detection of SMZ in the sample. The coupling antigens are pre-coated on the micro-well stripes. The SMZ in the sample and the coupling antigens pre-coated on the micro-well stripes compete for the anti-SMZ antibodies. After the addition of the enzyme conjugate, the TMB substrate is added for coloration. The optical density (OD) value of the sample has a negative correlation with the SMZ in it. This value is compared to the standard curve and the SMZ concentration is subsequently obtained.

Intended Uses: For the quantitative detection of Sulfamethoxazole (SMZ) concentration in tissue, serum, urine, egg, honey, milk, feed.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
