ADDITIONAL INFORMATION

Related Product Information for USP7 recombinant protein	Short Description: Recombinant human USP7 was expressed in a baculovirus expression system as the full-length protein (accession number NP_003461.2) with an N-terminal 6xHis-tag. The molecular weight of the protein is 131.3 kDa. The purity of USP7 protein is >80% by SDS-PAGE. It is suitable for analysis of enzyme function and transcription factor regulation as well as for use in the study of enzyme kinetics, inhibitor screening, and selectivity profiling. Background: USP7 (Ubiquitin Specific Peptidase 7 (Herpes Virus-Associated)) belongs to the peptidase C19 family, which includes ubiquitinyl hydrolases. USP7 de-ubiquitinates target proteins such as FOXO4, p53/TP53, MDM2, UHRF1, PTEN and DAXX. Together with DAXX, USP7 prevents MDM2 self-ubiquitination and enhances the E3 ligase activity of MDM2 towards p53/TP53, thereby promoting p53/TP53 ubiquitination and proteasomal degradation. USP7 de-ubiquitinates p53/TP53, preventing degradation of p53/TP53, and enhances p53/TP53-dependent transcription regulation, cell growth repression and apoptosis. USP7 also de-ubiquitinates FOXO4 and inhibits FOXO4-induced transcriptional activity. Together with DAXX, USP7 is involved in the de-ubiquitination and translocation of PTEN from the nucleus to the cytoplasm, both processes that are counteracted by PML. USP7 de-ubiquitinates UHRF1, which prevents its degradation and promoting DNA methylation by DNMT1.
