

AAV2 elisa kit

AAV2 ELISA Assay

CATALOG #
AAA60735

PRODUCT SYNONYMS

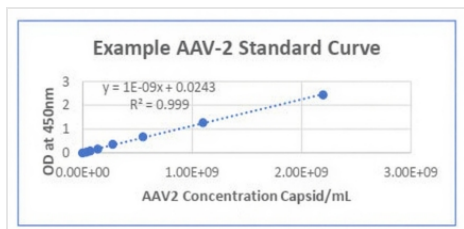

AAV2; AAV2 ELISA Assay; AAV2 elisa kit

PRODUCT SPECIFICATIONS

Preparation and Storage

Store at +4 degree C for short term; -20 degree C for long term

ADDITIONAL INFORMATION

Related Product Information for AAV2 elisa kit

Principle of the Assay: Microtitration wells coated with murine anti-AAV2 monoclonal capture antibody are exposed to test specimens, which may contain AAV2 reactive determinants. The AAV2 viral particles in the specimen are specifically captured onto the immobilized antibody during specimen incubation. The captured antigen is then reacted with a biotinylated mouse monoclonal AAV2 detection antibody. Subsequently, streptavidin-HRP conjugate is then added. Following a wash cycle, specifically bound enzyme conjugate is detected by reaction with the substrate solution, tetramethylbenzidine (TMB). The assay is measured spectrophotometrically to indicate the level of AAV2 reactive determinants present in a sample. The assay can be used to measure titrations for AAV2 -- including AAV2 wildtype virions, assembled/intact empty AAV2 capsids, and recombinant virions.
