

Human Gigaxonin (GAN) ELISA Kit | GAN elisa kit

Human Gigaxonin (GAN) ELISA Kit

CATALOG #
AAA64116

REACTIVITY
Human

PRODUCT SYNONYMS

Gigaxonin (GAN); Human Gigaxonin (GAN) ELISA Kit; GAN1; KLHL16; Giant Axonal Neuropathy; Kelch-like protein 16; GAN elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of GAN. No significant cross-reactivity or interference between GAN and analogues was observed.
Sequence Length	597
Samples	Tissue homogenates and other biological fluids.
Assay Type	Sandwich
Detection Range	0.156-10ng/mL
Sensitivity	0.055ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level GAN were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level GAN were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	For unopened kit, all reagents should be kept according to the labels on vials. The TMB Substrate, Wash Buffer, Stop Solution should be stored at 4 degree C. All others should be stored at -20 degree C.

ADDITIONAL INFORMATION

Related Product Information for GAN elisa kit	Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of GAN in human tissue homogenates and other biological fluids. Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to GAN. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to GAN. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain GAN, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of GAN in the samples is then determined by comparing the O.D. of the samples to the standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	11545731
NCBI GeneID	8139
NCBI Accession #	NP_071324.1
NCBI GenBank Nucleotide #	NM_022041.3
UniProt Accession #	Q9H2C0
Molecular Weight	67,638 Da
NCBI Official Full Name	gigaxonin
NCBI Official Synonym Full Names	gigaxonin
NCBI Official Symbol	GAN
NCBI Official Synonym Symbols	GAN1; KLHL16
NCBI Protein Information	gigaxonin
UniProt Protein Name	Gigaxonin
UniProt Gene Name	GAN
UniProt Synonym Gene Names	GAN1; KLHL16

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
