Related Product Information for GLP1 elisa kit

Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of GLP1 in rat serum, plasma and other biological fluids.

Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to GLP1 has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled GLP1 and unlabeled GLP1 (Standards or samples) with the pre-coated antibody specific to GLP1. After incubation the unbound conjugate is washed off. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of GLP1 in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of GLP1 in the sample.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
