

General Ethinylestradiol (EE) RTU ELISA Kit | EE rtu elisa kit

General Ethinylestradiol (EE) ELISA Kit

CATALOG #
AAA70353

REACTIVITY
General

PRODUCT SYNONYMS

Ethinylestradiol (EE); General Ethinylestradiol (EE) ELISA Kit; Ethinyl Estradiol ; Ethynyl Estradiol; Ethinyl Oestradiol; EE rtu elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay has high sensitivity and excellent specificity for detection of EDN1. No significant cross-reactivity or interference between EDN1 and analogues was observed.
Samples	Porcine Serum, Plasma, Tissue Homogenates, Cell Lysates, Cell Culture Supernates And Other Biological Fluids
Assay Type	Quantitative Competitive
Detection Range	12.35-1,000pg/mL
Sensitivity	4.74pg/mL.
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level EDN1 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level EDN1 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	For unopened kits: All the reagents should be kept at 4 degree C upon receipt. For opened kits: Once the kit is opened, the remaining reagents still need to be stored according to the above storage conditions. In addition, return the unused wells to the foil pouch containing the desiccant pack and reseal along entire edge of zip-seal.

ADDITIONAL INFORMATION

Related Product Information for EE rtu elisa kit

Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of EDN1 in porcine serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.

Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to EDN1 has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled EDN1 and unlabeled EDN1 (Standards or samples) with the pre-coated antibody specific to EDN1. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of EDN1 in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of EDN1 in the sample.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
