IMAGES

FCM/FACS (Flow Cytometry)

Flow cytometry using the Anti-CD19 antibody CAT-13.1E10. Paraformaldehyde fixed Daudi cells were stained with anti-unknown specificity antibody or the rabbit IgG version of CAT-13.1E10 at a dilution of 1:100 for 1h at RT. After washing, the bound antibody was detected using a goat anti-rabbit IgG AlexaFluor 488 antibody at a dilution of 1:1000 and cells analyzed using a FACSCanto flow-cytometer.

IF (Immunofluorescence)

Immunofluorescence staining of fixed human peripheral blood leukocytes with anti-CD19 antibody CAT-13.1E10. Immunofluorescence analysis of paraformaldehyde fixed human peripheral blood leukocytes on Shi-fix coverslips stained with the chimeric rabbit IgG version of CAT-13.1E10 at 10ug/ml for 1h followed by Alexa Fluor 488 secondary antibody (2ug/ml), showing membrane staining. The nuclear stain is DAPI (blue). Panels show from left-right, top-bottom DAPI, merged channels and an isotype control. The isotype control was an unknown specificity antibody followed by staining with Alexa Fluor 488 secondary antibody.
