IF (Immunofluorescence)

Immunofluorescence staining of HeLa cells with anti-Amyloid Beta 21F12

Immunofluorescence analysis of paraformaldehyde fixed HeLa cells stained with the chimeric rabbit IgG version of 21F12 (AAA72313) (1:1000 dilution) for 1h followed by Alexa Fluor 488 secondary antibody (1:1500 dilution), showing nuclear staining. The nuclear stain is DAPI (blue). Panels show from left-right, top-bottom AAA72313, DAPI, merged channels and an isotype control. The isotype control was anti-fluorescein antibody followed by staining with Alexa Fluor 488 secondary antibody.

ADDITIONAL INFORMATION

Related Product Information for anti-APP antibody	The original antibody was generated by immunizing A/J mice with a synthetic peptide (NH2-CYS-NH-CH2-(CH2)5-CO-GLMVGGVVIA-COOH) as an immunogen. Describes the generation of different amino acid forms of amyloid beta by different protease activities. This chimeric rabbit antibody was made using the variable domain sequences of the original Mouse IgG2b format, for improved compatibility with existing reagents, assays and techniques.
