ADDITIONAL INFORMATION

Related Product Information for TGFR2 recombinant protein	Recombinant human TGFR2 (190-end) was expressed by baculovirus in Sf9 insect cells using an N-terminal GST tag. The gene accession number is NM_003242. TGFbetaR2 is a member of the TGFbeta receptor subfamily and is a ser/thr protein kinase. TGFbetaR2-induced protein phosphorylation plays a key role in signal transduction that leads to mitogenic responses (1). The TGFbetaR2 receptor transmits signals from the cell surface to the nucleus and provides instructions for making transforming growth factor (TGF)-beta type II receptor. Mutations in TGFbetaR2 gene have been associated with Marfan Syndrome, Loeys-Deitz Aortic Aneurysm Syndrome, and the development of various types of tumors (2).
