Biological Significance	Plasmin is released as a zymogen called plasminogen (PLG) from the liver into the circulation. Plasminogen is converted into active plasmin by a variety of enzymes, including tissue plasminogen activator (tPA), urokinase plasminogen activator (uPA), kallikrein, and factor XII (Hageman factor). Fibrin is a cofactor for plasminogen activation by tissue plasminogen activator.
Cross-Reactivity	Reacts with plasminogen, plasmin and angiostatin. No cross-reactivity with other human serum proteins.
Biohazard Information	This product contains sodium azide as preservative. Although the amount of sodium azide is very small appropriate care must be taken when handling this product.
Immunogen	Plasminogen antibody was raised in mouse using human plasminogen as the immunogen.
Preparation and Storage	Store at 4 degree C.
