Biological Significance	Beta-actin is one of six different actin isoforms which have been identified in humans. This is one of the two nonmuscle cytoskeletal actins. Actins are highly conserved proteins that are involved in cell motility, structure and integrity. Alpha actins are a major constituent of the contractile apparatus. Beta actin is usually used as a loading control, for among others, the integrity of cells, protein degradation, in Western Blotting.
Cross-Reactivity	Mouse, rat, rabbit, chicken
Immunogen	beta Actin antibody was raised in mouse using beta-Actin N-terminal peptide-KLH conjugates as the immunogen.
Preparation and Storage	Store at 4°C for short term, -20°C for long term.
