Application Data

Image: Western blot analysis of untransfected primary mouse neuron and glia cell cultures (lane 1), the same cells transduced with human Ubiquilin 2 wild type (lane 2), with Ubiquilin 2 P506T mutant (lane 3), with Ubiquilin 2 P497S mutant (lane 4) and with enhanced GFP control (lane 5), all probed with this antibody. Protocol on datasheet.

Application Data

Image: HeLa cells staining with Ubiquilin 2 (green), and counterstained with chicken polyclonal Vimentin antibody to (red) and DNA (blue). The antibody reveals strong nuclear lamina staining, while the Vimentin antibody reveals cytoplasmic intermediate filaments. Protocol on datasheet.

ADDITIONAL INFORMATION

Related Product Information for anti-UBQLN2 antibody	Ubiquilin 2, also known as UBQLN2, PLIC2 and Chap1, is a member of the ubiquilin protein family, which regulate the degradation of cellular proteins through proteasome or autophagy-like pathways. Humans have four ubiquilin genes, each encoding a separate protein referred to as Ubiquilin 1, 2, 3 and 4. All ubiquilins contain an N-terminal ubiquitin-like (UBL) domain and a C-terminal ubiquitin-associated (UBA) domain, while the central part of the molecules are highly variable.
