

Human IgD ELISA Kit

Human IgD ELISA Kit

CATALOG #
AAA76914REACTIVITY
Human

PRODUCT SYNONYMS

Human IgD; Human IgD ELISA Kit; Human IgD elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Human biological samples
Assay Type	Sandwich
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for Human IgD elisa kit	Intended Uses: The IgD test kit is a highly sensitive two-site enzyme linked immunoassay (ELISA) for measuring IgD in human biological samples. If the ELISA is to be used outside the intended use, the user may need to optimize for said use. Principle of the Assay: The principle of the double antibody sandwich ELISA is represented in Figure 1. In this assay the IgD present in samples reacts with the anti-IgD antibodies, which have been adsorbed to the surface of polystyrene microtitre wells. After the removal of unbound proteins by washing, anti-IgD antibodies conjugated with horseradish peroxidase (HRP) are added. These enzyme-labeled antibodies form complexes with the previously bound IgD. Following another washing step, the enzyme bound to the immunosorbent is assayed by the addition of a chromogenic substrate, 3,3',5,5'-tetramethylbenzidine (TMB). The quantity of bound enzyme varies directly with the concentration of IgD in the sample tested; thus, the absorbance, at 450 nm, is a measure of the concentration of IgD in the test sample. The quantity of IgD in the test sample can be interpolated from the standard curve constructed from the standards, and corrected for sample dilution.
