

Swine anti Rabbit Ig light chains kappa and lambda (free and bound) Secondary Antibody

Swine anti Rabbit Ig light chains kappa and lambda (free and bound)

CATALOG # AAA77617	HOST Swine	REACTIVITY Rabbit	APPLICATIONS Immunoprecipitation
------------------------------	----------------------	-----------------------------	--

PRODUCT SYNONYMS

Swine anti Rabbit Ig light chains kappa and lambda (free and bound); Polyclonal Secondary Antibody; Swine anti Rabbit Ig light chains kappa and lambda (free and bound) secondary antibody

PRODUCT SPECIFICATIONS

Host	Swine
Reactivity	Rabbit
Clonality	Polyclonal
Specificity	Precipitating polyclonal Swine antiSerum to Rabbit light chains, free and bound
Form/Format	Delipidated, heat inactivated lyophilized stable whole serum.
Concentration	The protein and IgG concentration in the antiserum are comparable to those of pooled swine serum. No foreign proteins added. (varies by lot)
Applicable Applications for Swine anti Rabbit Ig light chains kappa and lambda (free and bound) secondary antibody	IP (Immunoprecipitation)
Preservative	No preservative added, as it may interfere with the antibody activity. No foreign protein added.
Immunogen	Purified light chains isolated from polyclonal rabbit IgG. Freund's complete adjuvant is used in the first step of the immunization procedure.
Adsorption	Immunoaffinity adsorbed using insolubilized antigens as required to eliminate antibodies reacting with the Fc fragments of immunoglobulins or with other plasma proteins.
Product Type	Secondary Antibodies.
Cross-reactivity Note	Inter-species cross-reactivity is a normal feature of antibodies to immunoglobulins, since Ig of different species frequently share antigenic determinants. Cross-reactivity of this antiserum has not been tested in detail, but a wide scale of reactivity with IgG of other mammalian species must be assumed. The degree of cross-reactivity depends in addition to the phylogenetic relationship also on the concentrations of the reactants and the sensitivity of the assay format.
Antibody Titre	Precipitin titre not less than 1:64 when tested against normal rabbit serum in agar block titration.
Preparation and Storage	The lyophilized antiserum is shipped at ambient temperature and may be stored at 4 degree C, prolonged storage at or below -20 degree C. It is reconstituted by adding 1ml sterile distilled water. Lyophilized at 4 degree C: at least 10 years. Reconstituted at or below -20 degree C: 3-5 years. Reconstituted at 4 degree C: 7 days.

ADDITIONAL INFORMATION

Product Categories/Family for Swine anti Rabbit Ig light chains kappa and lambda (free and bound) secondary antibody	Antisera
--	----------

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
