ADDITIONAL INFORMATION

Related Product Information for Scl-70 elisa kit	Principle of the Assay: Diluted patient serum is added to wells coated with purified antigen. IgG specific antibody, if present, binds to the antigen. All unbound materials are washed away and the enzyme conjugate is added to bind to the antibody-antigen complex, if present. Excess enzyme conjugate is washed off and substrate is added. The plate is incubated to allow the hydrolysis of the substrate by the enzyme. The intensity of the color generated is proportional to the amount of IgG specific antibody in the sample. Intended Uses: The Scl-70 ELISA Kit is intended for the detection of IgG antibody to Scl-70 in human serum or plasma.
