ADDITIONAL INFORMATION

Related Product Information for CMV IgM elisa kit	Principle of the Assay: Diluted patient serum (serum diluent contains sorbent to remove Rheumatoid Factor and human IgG interference) is added to wells coated with purified antigen. IgM specific antibody, if present, binds to the antigen. All unbound materials are washed away and the enzyme conjugate is added to bind to the antibody-antigen complex, if present. Excess enzyme conjugate is washed off and substrate is added. The plate is incubated to allow the hydrolysis of the substrate by the enzyme. The intensity of the color generated is proportional to the amount of IgM specific antibody in the sample. Intended Uses: CMV IgM ELISA Kit is intended for the detection of IgM antibody to Cytomegalovirus (CMV) in human serum or plasma.
