Principle of the Assay: IL-6 is a pleiotropic cytokine that plays an important role in host defense by regulating immune and inflammatory responses. Produced by T cells, monocytes, fibroblasts, endothelial cells and keratinocytes, IL-6 has diverse biological functions. It stimulates B cell differentiation and antibody production, synergizes with IL-3 in megakaryocyte development and platelet production, induces expression of hepatic acute-phase proteins, and regulates bone metabolism. IL-6 signals through the IL-6 receptor system that consists of two chains, IL-6R alpha and gp130. Murine IL-6 is inactive on human cells, while both human and murine are equally active on murine cells. The Murine IL-6 Pre-Coated ELISA (Enzyme-Linked Immunosorbent Assay) kit is a solid phase immunoassay specially designed to measure Murine IL-6 with a 96-well strip plate that is pre-coated with rat monoclonal antibody specific for IL-6. It contains E. coli-expressed recombinant Murine IL-6. The detection antibody is a biotinylated goat polyclonal antibody specific for IL-6. The kit is analytically validated with ready to use reagents.
